Company Overview:

ParsTasmim mission is to provide professional solution and services to its customers, no matter how complex the systems or diverse the company is. ParsTasmim delivers complete Business Process Management (BPM) solutions allowing large scale corporate to create, capture, demonstrate, share, analyze and deploy business processes through out their enterprise.

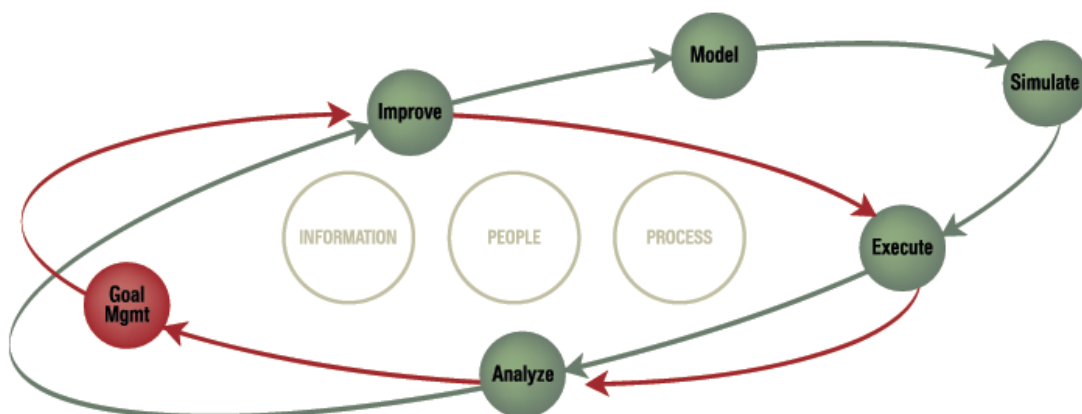

ParsTasmim integrates four critical elements - people, processes, systems and information — into technologies that expand the scope of Business Process Management to include business process investment protection, links between business goals and process execution and integrating extensive service expertise into enterprise solutions.

ParsTasmim is a member of Patsa Group. (<http://www.Patsa.com>)

Industry Solutions:

Government:

ParsTasmim provides focused business process solutions with experienced resources in workflow automation, imaging, document/content management, and Web-based services. With broad experience in integrating new technology with legacy systems, our solutions combines a comprehensive knowledge of its clients' business processes with the practical application of technology, techniques, and methods, to create value-added solutions for clients. By transforming paper into electronic images, automating processes with workflow-driven business process management, and enabling information access through the Web, Our Solutions helps government intensify their focus on the needs of its citizens, reduce costs, and collaborate more effectively while complying with regulations. Our solutions improve controls by providing accessibility, while ensuring security of information and privacy of individuals.

Financial Services:

Industry consolidation, mergers and acquisitions, dynamic markets, increasing investor scrutiny-these are just a few of the challenges that financial services companies face today. Our unprecedented BPM solutions enable you to link goals to execution, dynamic planning, automating processes, and monitoring systems. You have an end-to-end solution with complete visibility and control. This allows you to expedite a letter of credit more efficiently, distribute loans more effectively for a balanced workload, track every stage of the process, and maintain process control to ensure accountability.

Telecom:

There are two key success factors in the telecommunications industry:

- operational efficiency (for lower costs)
- ability to quickly offer new services (to leverage new technology and satisfy fickle consumers)

Most service providers today suffer from inefficient and inflexible business processes because of the complex and rigid IT infrastructures that grew out of the rapid growth they've experienced in the last decade. To meet these success factors, service providers must streamline their back-office processes through automation and standardization, improve visibility into key performance indicators, and eliminate barriers to change in their IT infrastructure. A process-centric approach to telecommunications can give operators the platform and tools they need to do all of these things. ParsTasmim is a provider of business

process management and integration solutions to telecommunications companies. These solutions include:

Enterprise BPM and Service Orchestration Solutions has been designed to facilitate the provisioning of multiple distinct services from a single platform. It addresses the operator's desire for organizational flexibility and reduced operational costs, increasing the operator's ability to quickly create new product bundles in response to market conditions and opportunities.

Business-Driven Integrated OSS/BSS solutions that integrate the front and back offices to function seamlessly for superior customer service and improved operational performance, resulting in greater efficiency and reduced cost.

Consolidated Customer Care solutions that allow providers to obtain a single view of the customer across all systems and deliver customer self service over the web driving lower costs and improved customer satisfaction.

End-to-end Performance Management solutions for increased performance and uptime of content and application services.

Insurance:

Working to grow profits in an increasingly competitive business climate-while complying with government regulations and meeting high customer and agent expectations-is driving insurance companies to take a fresh look at their business processes. The ability to streamline underwriting and claims processing has far-reaching impact on your capacity to win new business and gain a competitive edge. Our solutions enable you to maximize process efficiency and solidify your competitive advantage. We offer proven solutions for everything from managing electronic documentation and automating work processes, to leveraging advanced business process management technologies to connect people, processes, systems, and information.
